

**IN THE ABSTRACT:**

Please modify the Abstract of the Disclosure as indicated below:

A new and distinct Chrysanthemum cultivar is provided that is a whole plant mutation of the 'Chalunair' cultivar (United States Plant Patent Application No. 10/114,956, filed April 4, 2002, now abandoned). The natural flowering time is mid-October. Attractive ~~blossoms~~ inflorescences of the spoon-type are formed that display bright red ray florets and yellow disc florets. The growth habit of the plant is rather dense, stocky, compact, and uniform. Elegant medium green foliage with flexible stems is formed. The plant displays good culture regularity and grows well in pots.
